

# ROLLIT CARGO

projects in motion

## Management System Compliance Statement

Rollit Cargo is committed to implement high standards of quality, environmental management, and occupational health and safety.

We are developing and implementing a management system that aligns with the requirements of ISO 9001 (Quality Management), ISO 14001 (Environmental Management), and ISO 45001 (Occupational Health and Safety Management).

Although we will adhere to the principles and guidelines outlined in these international standards, it is important to note that our management system may not be certified in foreseeable future. This means that, although we strive to fulfill the standards' criteria and continuously improve our processes, we have not yet undergone any formal certification process by an accredited body.

Our commitment to quality ensures that we consistently meet customer expectations and enhance satisfaction.

Through the integration of environmental considerations in our operations, we aim to minimize our ecological footprint and promote sustainability.

Additionally, we prioritize the health and safety of our employees and these of our subcontractors by identifying potential hazards and implementing effective control measures.

We are actively working towards implementation and are dedicated to ongoing improvement in our management practices.

Our goal is to enhance our processes, increase efficiency, and to ensure a safe and environmentally responsible workplace for all stakeholders.

We also will strive for sustainability what involves making choices that benefit the environment, society, and economy by considering, amongst others, following steps:

1. **Sustainable Transportation:** we aim to reduce carbon footprints using amongst others biodiesel, driving electrical cars, ...
2. **Reduce Waste:** we implement practices that might minimize waste, such as recycling and reducing single-use plastics.
3. **Conserve Energy:** we are using energy-efficient appliances and switch to renewable energy sources like solar and/or wind, and promote energy-saving habits.
4. **Water Conservation:** we look for the most water friendly ways of shipping
5. **Continuous Learning:** we will stay informed about sustainability issues and innovations, and be open to adopting new practices.
6. **Educate and Advocate:** we also will strive to raise awareness about sustainability issues and advocate for policies that promote environmental protection.

By taking above steps, we think we can already contribute to a more sustainable future!
